

RAKSHITH RAJ M

Bengaluru, Karnataka, India | +91-7795356018 | rakshithraj14112001@gmail.com
LinkedIn: linkedin.com/in/rakshith-raj-m-48344b2aa | GitHub: github.com/Rakshithraj14

PROFESSIONAL SUMMARY

Software Developer specializing in AI-powered applications and scalable SaaS solutions. Expert in modern web technologies (ReactJS, NodeJS, TypeScript), cloud platforms (AWS), and AI/ML integration (LLMs, Deep Learning). Proven ability to architect end-to-end systems from frontend to AI model integration, with experience in blockchain technologies and production-grade applications. CGPA: 8.51/10.

PROFESSIONAL EXPERIENCE

Software Developer (SDE) <i>GPUNET, India</i>	August 2025 – Present <i>7 months</i>
---	---

- Architecting and developing scalable SaaS applications using ReactJS and TypeScript
- Implementing cloud-native solutions on AWS with emphasis on performance optimization and reliability
- Designing optimized MySQL database schemas and RESTful APIs for high-performance data operations
- Establishing Git workflows, branching strategies, and CI/CD pipelines for efficient team collaboration
- Integrating third-party services and APIs to enhance application functionality and user experience

DevOps Engineer Intern <i>IBM / Rooman Technologies, Bengaluru</i>	February 2025 <i>On-the-Job Training</i>
--	--

- Completed intensive AI-DevOps Engineer training program certified by Visvesvaraya Technological University
- Gained hands-on experience with containerization (Docker), orchestration (Kubernetes), and cloud platforms
- Implemented CI/CD pipelines for automated testing, building, and deployment of applications
- Worked with infrastructure as code, monitoring tools, and automation frameworks for production environments
- Applied DevOps best practices including version control, configuration management, and continuous integration

KEY PROJECTS

- CosmoAI – Full-Stack AI Wrapper Application** | *TypeScript, React, Bun, Hono, Groq API, HuggingFace*
- Engineered production-ready AI application demonstrating modern AI integration patterns used by ChatGPT and Claude
 - Built microservices architecture connecting React frontend, Hono backend, and multiple AI providers (Groq Llama 3.1, Stable Diffusion)
 - Implemented intelligent prompt detection for automatic routing between text and image generation models
 - Designed real-time streaming chat interface with loading states and error handling for optimal user experience
 - Created modular, type-safe codebase with clean separation of concerns and reusable custom hooks

- Expense Bot – Telegram-based Personal Finance Tracker** | *TypeScript, Bun, Telegram API, PostgreSQL, Supabase, Docker* | <https://t.me/asuratrackerbot>
- Built a full-featured Telegram bot enabling natural language expense and income tracking with categorization and payment mode support
 - Designed a normalized PostgreSQL schema with indexed queries on user and date fields for fast financial summaries and month-over-month comparisons
 - Implemented NLP-style message parsing to extract amount, category, date, and transaction type from free-form user input
 - Containerized the application with Docker and automated image builds and deployments via GitHub Actions CI/CD pipeline

- Fraud Detection System** | *Python, Scikit-learn, Pandas, Jupyter Notebook, Machine Learning*
- Developed machine learning models (Logistic Regression, Random Forest) for identifying fraudulent financial transactions
 - Performed comprehensive EDA and feature engineering on large-scale transaction datasets
 - Achieved high accuracy through data preprocessing, model optimization, and evaluation with multiple metrics
 - Created data visualizations and analysis reports to communicate insights and model performance

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL, Solidity
Frontend Development: React.js, HTML5, CSS3, Tailwind CSS, Responsive Web Design
Backend Development: Node.js, Express.js, Hono, Bun, RESTful API Development, Microservices Architecture
Databases: MySQL, MongoDB
Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD Pipelines, Linux
AI / Machine Learning: TensorFlow, PyTorch, Scikit-learn, Deep Learning, LLM Integration (Groq, HuggingFace), GPU Acceleration
Developer Tools: Git, Version Control, Jupyter Notebook, Selenium
Data & Analytics: Data Analysis, Data Visualization
